The Company has no control over a number of matters that are important in determining the existence, magnitude and longevity of such risks and their results, including, but not limited to, economic, financial and political events. In recent times, the values of certain indices, futures, options, swaps, baskets and formulas have been volatile and volatility in those and other indices, baskets and formulas may occur in the future which may impact the value of pool of assets in the Underlying Investment Strategy.”

Such risks include, without limitation, changes in the applicable Underlying Strategy Value and how such changes will impact the amount of any principal or coupon payments linked to the applicable Underlying Strategy Value. The Company has no control over a number of matters that are important in determining the existence, magnitude and longevity of such risks and their results, including economic, financial and political events. Past performance of any Underlying Strategy Value to which any principal or coupon payments may be linked is not necessarily indicative*

of future performance. Investors should be aware that an Underlying Strategy Value may go down as well as up and/or be volatile and the resulting impact such changes will have on the amount of any principal or coupon payments will depend on the applicable strategy formula.

In case of principal/capital protected market linked debentures, the principal amount is subject to the credit risk of the Issuer whereby the Registered Debenture Holder may or may not recover all or part of the funds in case of default by the Issuer.

The Debentures are likely to be less liquid than conventional fixed or floating rate debt instruments. No representation will be made as to the existence of a market for a series of Debentures.
